Health Score: 94%
Total Ambiguities: 67

Sentence-Level Findings:

REQ-001 | Vague | High

Sentence: Software Requirements Specification (SRS) AI-Driven Job Matching Platform for Palestine Document Control Document Information Title Software Requirements Specification for AI- Driven Job Matching Platform Date May 19th, 2025 Status Draft Version 1.0 Prepared for Ministry of Labor (MoL), Palestinian Employment Fund (PEF) and Enabel.
Suggestion: Replace vague modal verb with a definite requirement.

REQ-003 | Vague | High

Sentence: While it may be shared publicly, it remains the intellectual property of Belgian agency for international cooperation (Enabel) and the Palestinian Ministry of Labour (MoL).
Suggestion: Replace vague modal verb with a definite requirement.

REQ-203 | Vague | High

Sentence: Indicates a requirement that will take place in phase 2 and the developer SHOULD should take it into consideration for future scalability.
Suggestion: Replace vague modal verb with a definite requirement.

REQ-205 | Vague | High

Sentence: The MAY developer is encouraged to consider this requirement generally, keeping future scalability in mind.
Suggestion: Replace vague modal verb with a definite requirement.

REQ-211 | Semantic | Medium

Sentence: In Scope The platform will include the following key components: ■ User Management System: Registration and profile management for job seekers, employers, external job sites, and administrators ■ Job Posting Management System: Creation, publishing, and search for job opportunities ■ AI-Driven Matching Engine: Skill-based matching algorithms using natural language processing, and recommender systems ■ Integration Framework: APIs and adapters for connecting with external job sites and government databases ■ Reporting and Analytics: Dashboards and reports for monitoring system performance and labor market trends Including (jobs posted, and users registered etc.) ■ Security Framework: Authentication, authorization, and data protection mechanisms ■ Multilingual Support: Full functionality in both Arabic and English ■ Limited onboarding and testing sessions with internal stakeholders.
Suggestion: Replace vague quantifier with exact value.

REQ-218 | Semantic | Medium

Sentence: Product Functions The AI-Driven Job Matching Platform will provide the following major functions: 1) User Registration and Profile Management 8 ■ Job seeker registration and profile creation ■ Employer registration and company profile management ■ User account enabling, disabling, deletion, and recovery ■ External job site integration ■ Administrator and site management accounts 2) Job Posting and Management ■ Job creation and publishing ■ Job classification and categorization ■ Job search and filtering ■ Job status management (enable,

disable functions) 3) AI-Driven Matching ■ A vector-based matching (skill-based, education, and behavior etc.) between job seekers and job postings ■ Resume/CV parsing and analysis ■ Job recommendation for job seekers ■ Candidate recommendation for employers 4) External System Integration ■ Real-time job data synchronization with external job sites (when available) ■ API-based data exchange with governmental databases 5) Reporting and Analytics ■ User activity monitoring and reporting ■ Employment statistics and trends ■ System performance metrics ■ Custom report generation 6) System Administration ■ User management and access control ■ System configuration and customization ■ Data management and backup ■ Security monitoring and audit ■ System performance management and control 2.3.
Suggestion: Replace vague quantifier with exact value.

REQ-219 | Vague | High

Sentence: User Classes, Characteristics, and Needs The platform will serve the following user classes: 1) Job Seekers ■ Youth between 15-29 years, including vulnerable youth people with disabilities and young women ■ Varying levels of education and technical skills ■ May have limited access to technology or internet connectivity 9 ■ Primary needs: Finding suitable job opportunities, and building professional profiles 2) Employers ■ Private sector enterprises of various sizes ■ Different industry sectors and geographical locations ■ Varying levels of technical sophistication ■ Primary needs: Posting job opportunities, finding qualified candidates, managing recruitment process 3) External Job Sites ■ Existing job portals and recruitment platforms ■ Varying technical capabilities and data structures ■ Primary needs: Data exchange, expanded reach, standardized job posting format 4) System Administrators ■ MoL and PEF staff responsible for platform management ■ Technical personnel with system administration skills ■ Primary needs: System monitoring, user management, data management, reporting 5) Government Officials ■ Decision-makers at MoL, PEF, and other government entities ■ Policy makers and labor market analysts ■ Primary needs: Labor market insights, employment statistics, system performance metrics 2.4.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-220 | Vague | High

Sentence: Operating Environment The platform will operate in the following environment: 1) Technical Environment ■ A web-based application accessible via standard browsers ■ Fully responsive web design for access via smartphones and tablets ■ Should be potentially for native mobile applications in future phases ■ Hosting options to be determined (on-premises, cloud, or hybrid) 2) Hardware Environment ■ Server infrastructure capable of supporting AI processing requirements ■ Adequate storage for user data, job listings, and analytics ■ Network infrastructure with sufficient bandwidth, high-availability, load balancing, auto scaling and reliability ■ Disaster recovery capabilities 10 3) Software Environment ■ Modern web technologies and frameworks ■ Database management system with high performance and scalability ■ AI and machine learning frameworks for matching algorithms ■ Security software for data protection and user authentication 4) User Environment ■ Various devices including desktop computers, laptops, tablets, and smartphones ■ Different operating systems and browser versions ■ Varying internet connection speeds and reliability ■ Multilingual user interface (Arabic and English) ■ Accessible by different groups of users such as people with disability 2.5.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-221 | Lexical | Medium

Sentence: Design and Implementation Constraints The following constraints will impact the design and implementation of the platform: 1) Technical Constraints ■ Must be able to integrate with existing MoL and PEF systems and databases ■ Must support integration with other external job sites ■ Must be accessible via standard web browsers without special plugins or settings ■ Must function effectively in areas with limited internet connectivity ■ Must be user-friendly especially with people with disability 2) Regulatory Constraints ■ Must comply with Palestinian data privacy and protection regulations ■ Must adhere to international standards for data security (e.g., GDPR principles) ■ Must support legal requirements for employment and recruitment 3) Business

Constraints ■ Must be implemented in phases, with basic functionality prioritized ■ Must be scalable to accommodate future expansion ■ Must be maintainable by MoL technical staff with appropriate training 4) User Constraints ■ Must accommodate users with varying levels of technical proficiency ■ Must support accessibility standards for users with disabilities ■ Must provide multilingual support (Arabic and English) 2.6.

Suggestion: Specify measurable criteria.

REQ-256 | Syntactic | High

Sentence: If automatic verification fails, the Ministry of Labor (MoL) SHALL be able to manually verify the employer's account based on submitted registration details and/or direct contact.

Suggestion: Avoid 'and/or'. Clarify explicitly.

REQ-272 | Vague | High

Sentence: The system SHOULD issue a unique API key or token to each partner for secure access, with support for optional IP whitelisting, usage limits, and token expiration management to ensure controlled and secure integration.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-274 | Vague | High

Sentence: The system SHOULD support job posting via a secure RESTful Push API, allowing external platforms to submit job opportunities directly to the job matching system.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-277 | Vague | High

Sentence: The system SHOULD provide a testing environment for external job sites to validate their integration.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-279 | Vague | High

Sentence: The system SHOULD implement comprehensive error handling and response logging by providing clear API response codes with descriptive messages for success, failure, duplicates, and validation errors.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-281 | Vague | High

Sentence: The system SHOULD grant external platforms access to view submission logs for monitoring and troubleshooting purposes.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-283 | Vague | High

Sentence: The system SHOULD return a unique job ID as a confirmation response after a job is successfully pushed via the API, enabling accurate record-keeping and integration synchronization for external systems.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-287 | Vague | High

Sentence: The system SHOULD support job synchronization of updates via the API, enabling external job sites to modify job details—such as deadline extensions, description edits, or early closure/deletion/deactivation—using the assigned job ID.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-289 | Vague | High

Sentence: The system SHOULD provide an optional sync dashboard—a lightweight web interface or endpoint—that allows partners to review the status of jobs posted via the API, including indicators for synced, failed, pending, and archived records.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-291 | Vague | High

Sentence: The system SHOULD also offer periodic or real-time access to integration usage statistics—such as the number of jobs submitted, matched, and viewed—for transparency, performance tracking, and reporting purposes.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-293 | Vague | High

Sentence: The system SHOULD provide access to the up-to-date API schema (e.g., via Swagger) and detailed field validation rules to ensure proper formatting and structure of job postings submitted through the API.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-295 | Vague | High

Sentence: The system SHOULD provide an option for source platforms to configure whether their attribution (e.g., source platform name) appears publicly on job postings or is only visible within the admin panel and system logs.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-297 | Vague | High

Sentence: The system SHOULD maintain an audit trail at the job level, recording which external job site created or modified each posting, and display this information within the MoL admin dashboard for traceability and accountability.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-337 | Semantic | Medium

Sentence: The system SHALL provide a structured job posting form that allows employers to add new job opportunities with the following fields: ■ Job title, summary, and required skills (with support for file upload or copy/paste input) ■ Contract type (e.g., full-time, part-time, training, project-based) ■ Required education level ■ Application deadline with an optional auto-close feature ■ Work format selection (Physical with employment location, Online, or Hybrid) ■ Gender, number of employees, etc ■ Required languages and proficiency levels ■ Link to the job if available.

Suggestion: Replace vague quantifier with exact value.

REQ-399 | Vague | High

Sentence: The system SHALL provide confidence scores for extracted information and highlight areas that may need manual verification.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-433 | Vague | High

Sentence: The system SHOULD provide APIs for real-time job data synchronization with external job sites.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-435 | Vague | High

Sentence: The system SHOULD implement data mapping and transformation to standardize job postings from different sources.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-437 | Vague | High

Sentence: The system SHOULD support both pull (importing jobs from external sites) and push (exporting jobs to external sites) integration models.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-439 | Vague | High

Sentence: The system SHOULD maintain synchronization logs and provide error handling for failed integrations.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-441 | Vague | High

Sentence: The system SHOULD support scheduled and on-demand synchronization options.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-443 | Vague | High

Sentence: The system SHOULD provide a dashboard to monitor integration status and data flow with external job sites.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-446 | Vague | High

Sentence: The system SHOULD integrate with relevant government databases for data verification and enrichment.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-448 | Vague | High

Sentence: The system SHOULD support integration with the MoL and PEF existing databases and systems.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-450 | Vague | High

Sentence: The system SHOULD support verification of educational credentials through integration with educational institution databases.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-452 | Vague | High

Sentence: The system SHOULD provide options for identity verification through government ID systems.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-454 | Vague | High

Sentence: The system SHOULD maintain audit trails of all data exchanges with government systems.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-456 | Vague | High

Sentence: The system SHOULD respect data privacy regulations when accessing and using government data.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-459 | Vague | High

Sentence: The system SHOULD provide a comprehensive API framework for integration with external systems.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-461 | Vague | High

Sentence: The system SHOULD implement RESTful APIs with JSON data format as the primary integration method.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-463 | Vague | High

Sentence: The system SHOULD provide detailed API documentation with examples and testing tools.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-465 | Vague | High

Sentence: The system SHOULD implement OAuth 2.0 for API authentication and authorization.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-467 | Vague | High

Sentence: The system SHOULD support API versioning to ensure backward compatibility.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-479 | Vague | High

Sentence: MOL Life dashboard should include current logins, number of current logins and last sessions, with links to these users profiles 3.5.2.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-481 | Vague | High

Sentence: The system SHOULD generate employment statistics and labor market insights from platform data.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-483 | Vague | High

Sentence: The system SHOULD track key metrics including job posting trends, application rates, hiring rates, and time-to-fill.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-485 | Vague | High

Sentence: The system SHOULD provide industry-specific analytics on job market demand and supply.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-487 | Vague | High

Sentence: The system SHOULD analyze skill demand trends to identify emerging requirements and skill gaps.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-489 | Vague | High

Sentence: The system SHOULD generate geographic distribution reports for jobs and candidates.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-491 | Vague | High

Sentence: The system SHOULD provide salary range analytics by industry, position, and location.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-493 | Vague | High

Sentence: The system SHOULD track employment outcomes and career progression where data is available.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-495 | Vague | High

Sentence: The system SHOULD generate periodic labor market reports for government stakeholders.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-498 | Vague | High

Sentence: The system SHOULD monitor and report on system performance metrics.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-500 | Vague | High

Sentence: The system SHOULD track matching algorithm performance including accuracy, precision, recall, and user satisfaction.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-502 | Vague | High

Sentence: The system SHOULD monitor system usage patterns including peak times, popular features, and user engagement.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-504 | Vague | High

Sentence: The system SHOULD track technical performance metrics including response times, resource utilization, and error rates.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-506 | Vague | High

Sentence: The system SHOULD provide dashboards for administrators to monitor system health and performance.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-508 | Vague | High

Sentence: The system SHOULD generate alerts for performance issues or anomalies.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-510 | Vague | High

Sentence: The system SHOULD maintain historical performance data for trend analysis and capacity planning.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-513 | Vague | High

Sentence: The system SHOULD provide a flexible reporting framework for generating custom reports through seamless integration with existing and available reporting tools such as Microsoft Power BI.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-515 | Vague | High

Sentence: The system SHOULD allow administrators to define report templates with configurable parameters.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-517 | Vague | High

Sentence: The system SHOULD support various report formats including tabular data, charts, and visualizations.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-519 | Vague | High

Sentence: The system SHOULD allow scheduling of recurring reports with automated distribution.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-521 | Vague | High

Sentence: The system SHOULD support export of reports in common formats (PDF, Excel, CSV).

Suggestion: Replace vague modal verb with a definite requirement.

REQ-523 | Vague | High

Sentence: The system SHOULD provide a report builder interface for users with appropriate permissions.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-525 | Vague | High

Sentence: The system SHOULD maintain a library of saved reports for quick access.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-527 | Vague | High

Sentence: The system SHOULD implement access controls to ensure users can only view reports appropriate to their role.

Suggestion: Replace vague modal verb with a definite requirement.

REQ-606 | Lexical | Medium

Sentence: All user interfaces shall adhere to the following requirements: ■ The system SHALL have a user-friendly UX/UI dynamic interface that showcases the latest job postings, featured opportunities, and relevant sector-based news or career advice, all presented in a visually engaging and user-friendly layout ■ Responsive design for desktop and mobile devices ■ Multilingual support (Arabic and English) and different AI functions and techniques for both Arab and English to be utilized 24 ■ Implement Web Content Accessibility Guidelines (WCAG 2.1 or later) to ensure accessibility and inclusivity for users with disabilities, including support for screen readers, appropriate color contrast, and keyboard navigation.

Suggestion: Specify measurable criteria.

REQ-777 | Semantic | Medium

Sentence: The system SHALL implement responsive design to support various screen sizes and devices.

Suggestion: Replace vague quantifier with exact value.
